

“

1. Write a python program to reverse a string.
2. Write a python program to reverse the order of words in a string.
3. Write a python program that takes a string at the command line, and a flag of '-r' or '-w'.

The -r flag should reverse the string letter for letter,
the -w should reverse the string word for word.

The string should be entered at the command line with quotes (single or double) around it.

The result should be printed to the screen

4. Update the program to take a file name of a file containing the input string. The output should still be printed to the screen.

It's 100% OK to write mini-program, and edit each program to created the next one.

Bonus points if you check it into version management, and tag or show revision.

Sending

program as attachment is OK also.
